Optimizing Industrial manufacturer's efficiency

Improve profitability and productivity along your supply chain, from factory floor to your customer's door

Operating efficiently with a macro view of your supply chain

Manufacturing is under intense scrutiny by government organizations to ensure product pedigree, authenticity and quality control. The pressure to implement lean principles and just-in-sequence capabilities means manufacturers must know where materials originate, where they reside in the supply chain, and how to deploy them in real-time to keep the line rolling.

Intermec and its partners make it easy. We collaborate with you to understand your unique situation and help you create a total solution—one that seamlessly tracks materials and labor through a myriad of production cycles and supply chains.

Reducing errors and saving costs

The sooner, the better. That's especially true when it comes to the production process, where early detection of assembly and sequencing errors can save significant amounts of time and money.

Intermec technologies help reduce errors and increase productivity in manufacturing operations. Together with our partners, we provide manufacturers with the ability to ensure that products and components have been correctly tested and assembled before leaving the plant. Indeed, our real-time barcode and RFID systems can reduce errors, resulting in significant cost savings.

Protecting workers in hazardous environments

When your people need to enter a production environment to perform maintenance or take readings, it's your job give them real-time information and communications—without risking their safety.

It's our job, too. For many years, we've built supply chain solutions. Our mobile computers for hazardous locations combine superior design, ruggedness, and communications capability. More important, they continue to be the safest possible solutions. Our design engineers closely follow changing international certification requirements, so safety-enhancing features can be quickly incorporated into our products, and supported on a global basis.

The time is now. The technologies are here. Only Intermec brings together the rugged products, industry alliances and deep experience you need. Imagine the possibilities.

Six ways Intermec helps industrial goods manufacturers

Combining a complete range of rugged technologies, a collaborative approach, and strong industry partnerships, Intermec makes implementation of your supply chain systems simpler, easier, more complete and effective.

Robust, easily integrated products

From next-generation mobile device and radio frequency identification (RFID) readers to breakthrough scanning technology, our complete product line is built tough for dependable, reliable service. All of our products are designed to take the abuse of harsh environments, preserve your data, and last for a full shift of operation. They quickly integrate with your existing infrastructure. And, they deliver the fastest possible performance so your people—and your organization—can move at top speed.

Seamless integration and management

Intermec systems are based on industry standards to provide seamless integration and assured compatibility—now and for years to come. We provide full-scale supply chain solutions that slash your design, implementation and support costs. And we wrap it all up with SmartSystems™, remote device and system management software that delivers rapid deployment and easy troubleshooting through your existing network management solution.

Superior solutions with Cisco

To deliver best-in-class performance, we've worked with Cisco to design solutions that seamlessly integrate with their wireless networks. You can be assured of superior end-to-end performance without compromising the security of your wired infrastructure.

Additionally, all Intermec's networked devices are certified as Cisco Compatible Extensions (CCX), and we continue to be actively engaged with this industry leader to define future functionality.

Powerful partnerships

A successful, trouble-free operation requires the right mix of hardware, software, services and related technologies. That's why Intermec partners with leaders such as Cisco, IBM, Microsoft, Oracle and SAP. Through our close collaboration, we're able to provide you with proven, end-to-end solutions.

Expert service and support

Intermec's experienced industrial goods professionals work closely with you to choose systems that will have the greatest strategic impact on your business. Our Global Services team helps you achieve flawless implementations on or ahead of schedule, as well as providing cost-effective long-term preventive maintenance and repair services.

Global reach

Powered by a global team of experts, Intermec has 40 years of innovation and experience, including more than 25 years serving the industrial goods industry. We provide full service and support in more than 70 countries around the world. Our clients include 75% of Fortune 500 companies, and Intermec's global resources enable us to serve you everywhere you do business.

Hazardous Environments

From the initial source to final delivery, RFID provides increased production efficiency and plays a critical role in reducing errors. By flawlessly monitoring parts, assets and processes, RFID can reduce human errors, improve runtime and eliminate costly re-work. Count on our proven RFID expertise and strong partnerships to reduce your implementation risks and help you unlock the technology's full potential.

Error Proofing with RFID

You can't take any chances when it comes to safety – especially in hazardous environments. That's why Intermecc is committed to providing the highest level of safety with a variety of i-safe and non-incendive solutions. Our solutions help you satisfy the growing number of safety, security, regulatory and reporting requirements. All while helping you monitor and manage a variety of work environments. We offer worldwide support, long product lifecycles, and complete supply chain compatibility.

Manufacturing

Warehouse/

Automatic RFID tag reading with fixed and forklift-mount readers

Accurate pallet, case and tote tracking with RFID labels/tags

Faster picking with speech recognition

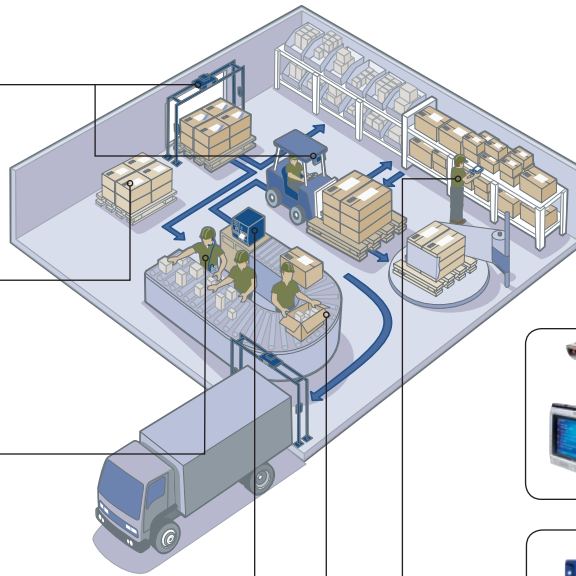

Print wirelessly with bar code printers. They also write to RFID chips embedded in a label and simultaneously print bar codes and human-readable text

Timekeeping and work-in-progress with rugged fixed mount computers and cordless scanners

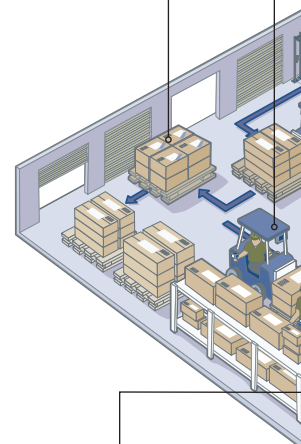

Manage inventory and improve order picking with mobile computers

Picking with vehicle-mounted computers and cordless scanners

Accurate pallet, case and tote tracking with RFID labels/tags

Real-time delivery tracking with WWAN and GPS-enabled mobile computers and printers

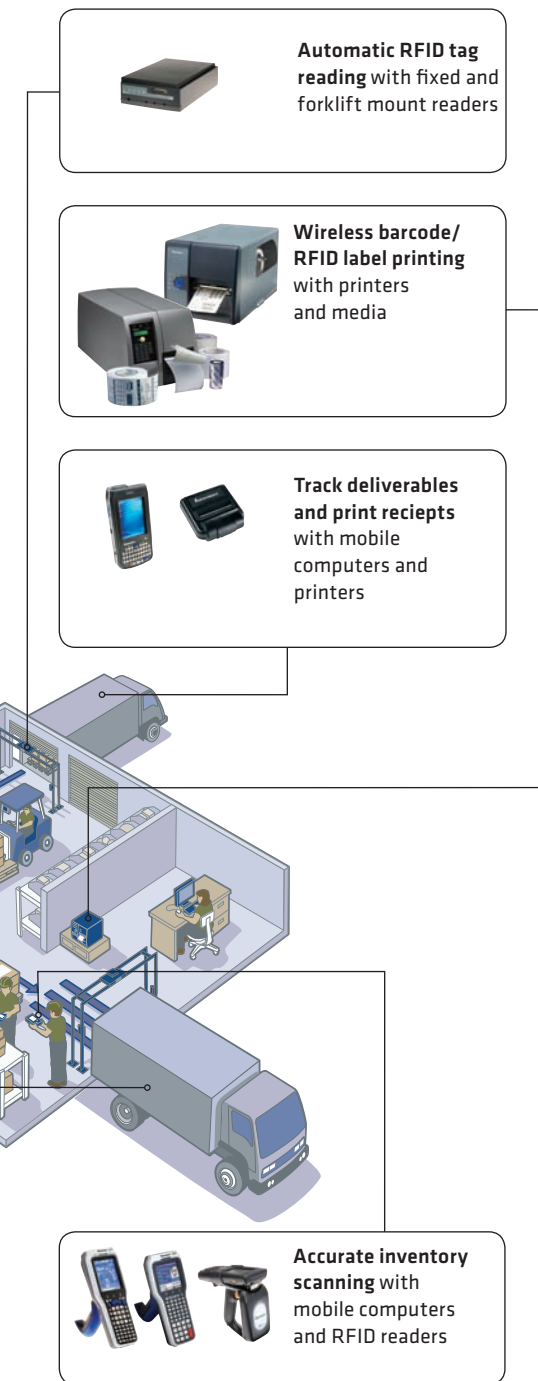

Technology Convergence

Intermec mobile systems allow employees to fully leverage industry-leading applications on common platforms. Our systems deliver on the promise of today's technology by integrating video, scanning, cameras, VoIP, Cisco CCX compatible WiFi, Bluetooth, 3G WAN radios, speech recognition, mag stripe readers and RFID.

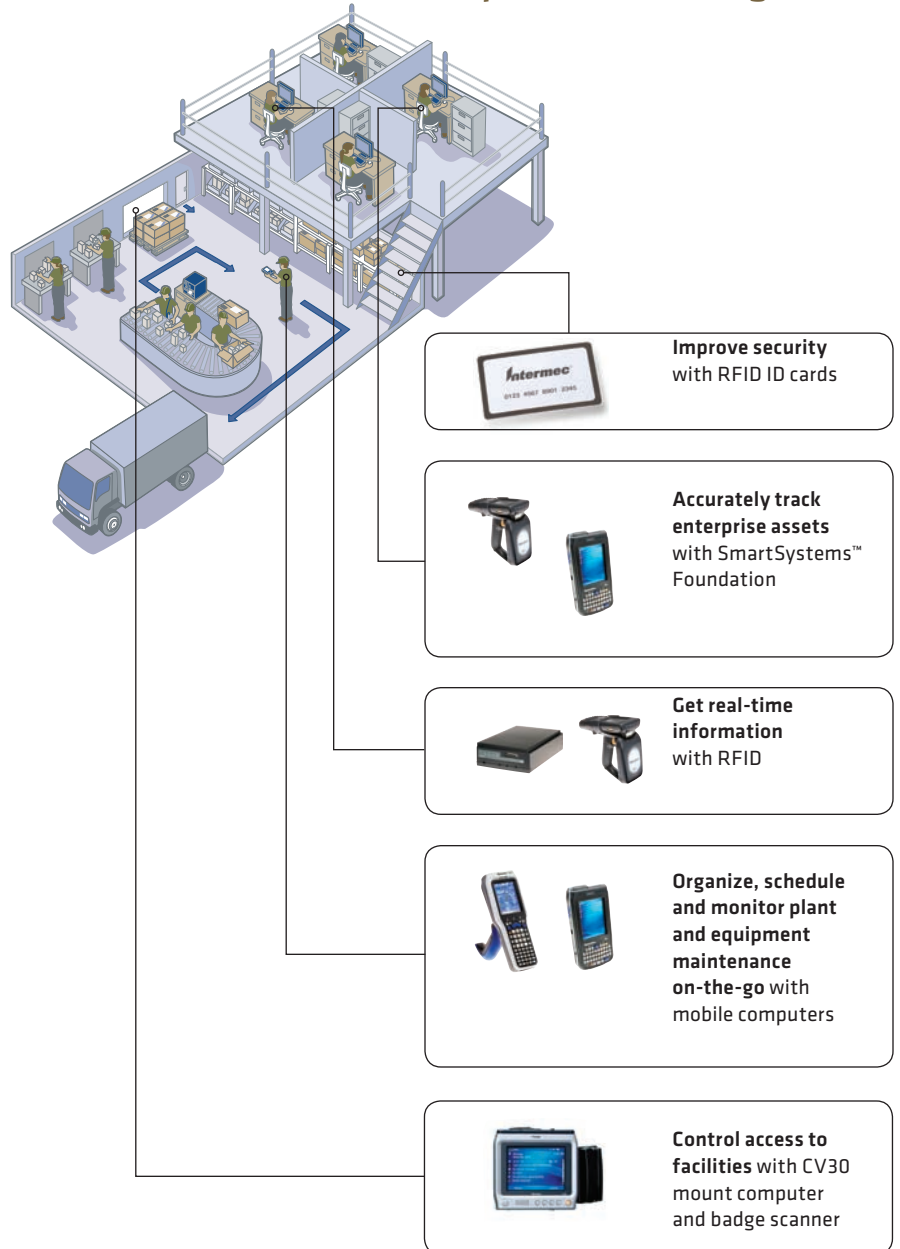

Remote Device and Systems Management

To deliver rapid deployment and maintenance, we provide SmartSystems™, a software platform that provides a single, integrated environment for hands-free deployment and centralized management of both remote and on-site devices. The SmartSystems Foundation works with all Intermec components—including mobile computers, RFID readers, printers and bar code scanners—to maximize your IT resources.
